Name – Amit

Roll no. 2301010471

Group – A

Section – G

Task : Create a GitHub repository for a sample application, configure Jenkins, run a CI/CD pipeline, deploy the application locally, and document the process with real screenshots.

1. Aim and learning outcomes

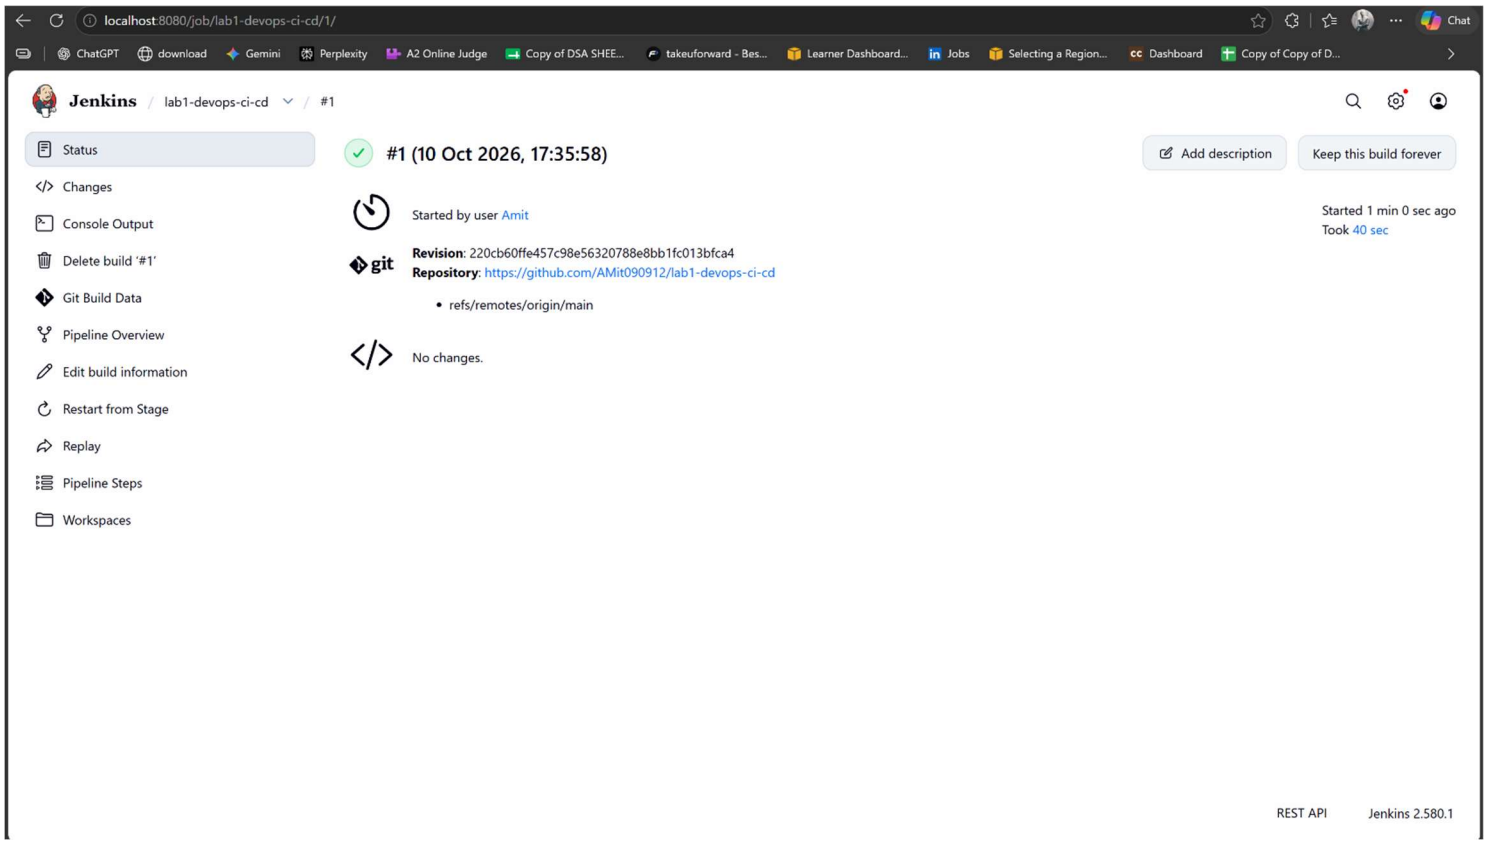

The aim of this lab is to establish a basic DevOps workflow using Git, GitHub, Jenkins, and a small Python web application.

- Use Git for version control and maintain meaningful commits.
- Store source code and pipeline configuration in GitHub.
- Configure Jenkins to retrieve the repository and run automated validation.
- Build a deployable copy of the application and deploy it to a local test server.
- Capture evidence and document the outcome.

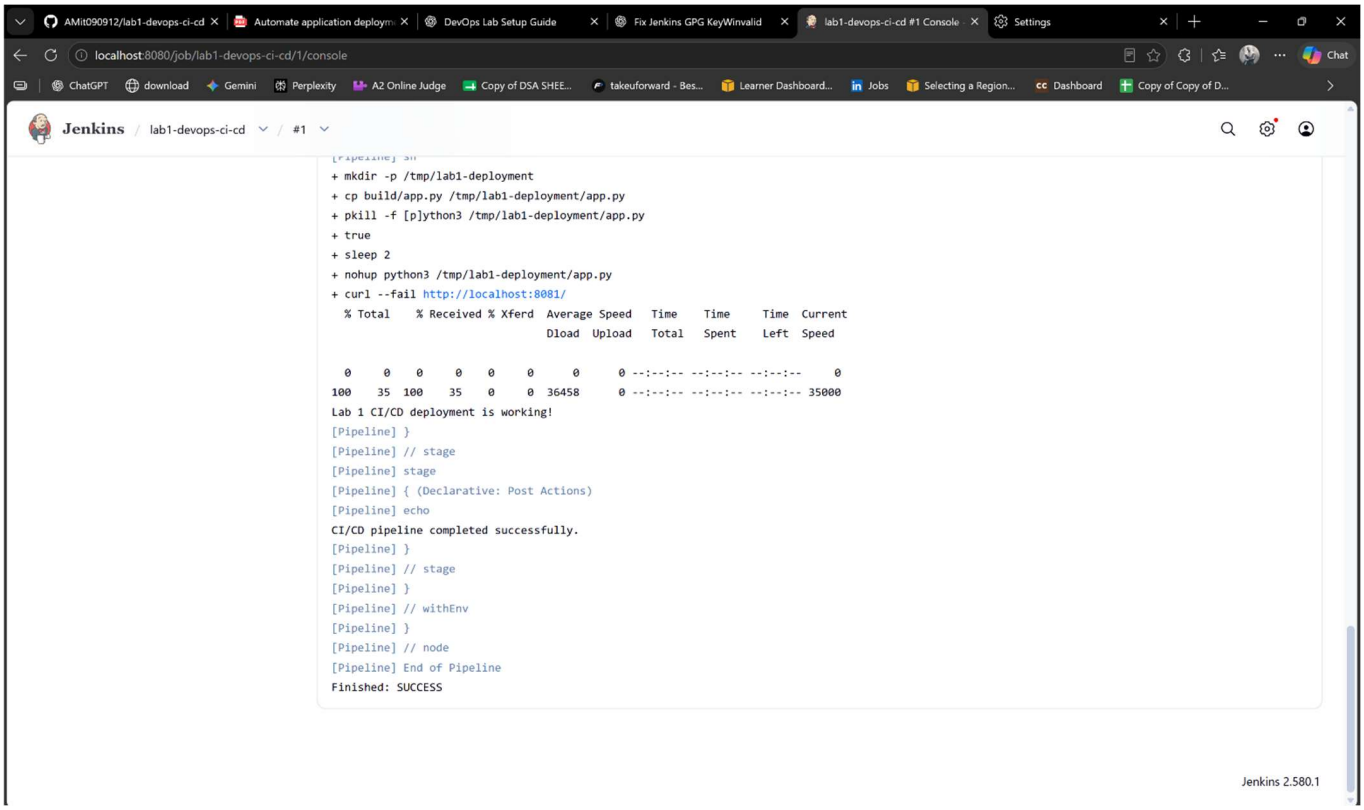

2. Requirements

Ubuntu Linux 24.04 LTS, an internet connection, a GitHub account, Git, Java 21, Python 3, Jenkins, and a web browser. VS Code is recommended for editing files

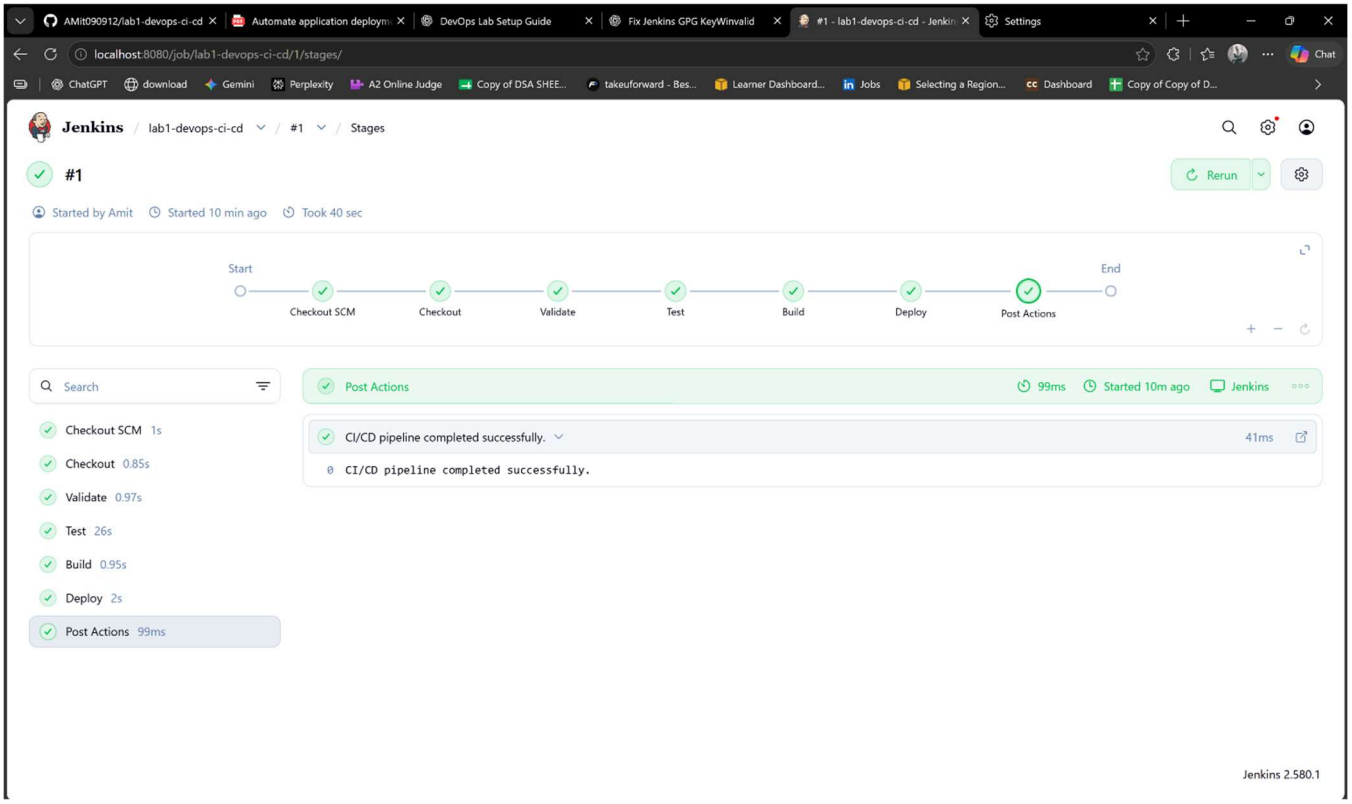

PROOF:

Jenkins Console Output:

Jenkins pipeline stages:
